

To create a suspended ceiling finish definition

In this example, we will set up the defaults to use a custom suspended ceiling finish and an appropriately high ceiling height. You could instead create these conditions for only one floor - or only one room - if that is what your project calls for.

1. Select **Edit > Default Settings** from the menu, and in the **Default Settings** dialog:

- Click the **>** next to **Rooms** to expand this category.
- Click on **Normal Rooms** to select it.
- Then click the **Edit** button.
